# 1.3-exploratory\_analysis\_fancy\_plot

October 20, 2020

### 1 Imports

```
[1]: import sys
import os
import numpy as np
import matplotlib as mpl
import matplotlib.pyplot as plt

[2]: project_path = os.path.abspath(os.path.join('..'))

if project_path not in sys.path:
    sys.path.append(f'{project_path}/src/visualizations/')
```

### 2 Setup

```
[3]: mpl.rcParams['figure.figsize'] = (9, 5)
```

#### 3 Goal

My goal is to visualize various aspect of the COVID-19 pandemic.

from covid\_data\_viz import CovidDataViz

#### 4 Data sources

In this project I use data from the following sources: -  $\frac{1}{1000} \frac{1}{1000} \frac{1}{10$ 

## 5 Data loading

```
[4]: cdv = CovidDataViz()
```

## 6 Fancy plot

Visual for repo readme.

```
[5]: countries = ['Germany',
                                                         'France',
                                                         'Italy',
                                                         'Spain',
                                                         'United Kingdom',
                                                         'Russia',
                                                         'India',
                                                         'Brazil',
                                                         'US',
                                                         'Poland',
